

F1 Module File — Histories of making

Sep 27, 2026 · @Mohammad AlFalasi

Status, and whether research or structure comes first

F1 is at structure v3.6 after research sprints 2 to 6, past gate G1 (2026-09-28) and in phase 4 of workflow v3.2; and the answer to your question is that both directions are real and necessary, that the danger is whichever one is silent, and that the fix is a rule that makes each turn of the loop explicit.

What actually happened in F1. The structure came first: the original syllabus set 23 units before any research. Sprint 1 then changed the structure (pivots became recurrences, continents became worlds joined by networks, five units were added), which is research determining structure. Sprint 2 then went looking for objects, dates and frameworks for those units, which is structure determining research. That loop is correct. It becomes a problem in two ways:

Failure	What it looks like	Why it is dangerous
Structure silently determines research	Research only fills predetermined units; nobody asks whether "Africa" is the right unit, only which objects go in it	The module confirms itself; the original syllabus's blind spots become permanent
Research silently determines structure	The module bends to whatever sources are rich in; CC0 collections are strong on Europe, East Asia, the Islamic world and the Americas, thin on Oceania and early Africa	The structure quietly reproduces the bias of the record, which is exactly what F1 teaches against

The rule adopted: two budgets per sprint. Every research sprint splits its effort between filling and testing, and reports both.

1. Filling (directed by the structure): find objects, dates, sources and frameworks for the units as they stand. Output: registers and claims.

2. Testing (directed against the structure): build a blind map of the subject from benchmarks without looking at our units (tables of contents, course structures, readers' sections, the field's own debates); compare it with the units in a coverage matrix; hunt for what sources are rich in that we have no unit for, and what we have units for that sources are poor in. Output: findings that argue for structural change.

The split is about 70/30 in the first two sprints of a module and about 85/15 afterwards. A testing finding changes the structure only through a versioned entry, and only with evidence: two independent sources, or one benchmark plus one source. After gate G3 (specs and data approved) structural changes stop reopening the module and go to a next-version backlog, so production is not destabilised; research continues, the changes queue.

Two detectors run permanently. The coverage report per world shows when the structure is bending to sources (a world with many objects and few units, or many units and few objects). The blind-map matrix (§3) shows when the structure is ignoring the field.

For the program as a whole. The same rule applies at the level of the Master Structure: each module's testing budget can propose changes to other modules and to the levels, through the same versioned path; and the first module of each level runs testing at the higher share, because it is the one most likely to find that the level's shape is wrong.

Research log

Sprint 2 answered three of sprint 1's six open questions, verified the collection pipeline end to end, and produced one finding that changes a unit and one that changes the Atlas; sprint 1's log stays in F1 Pass 2 v1 §3 and is not repeated here.

Sprint 2 findings

#	Finding	Evidence	Effect
2.1	The number of independent inventions of writing is itself contested: <cite index="49-1">most scholars hold that writing was invented independently at least four times — Mesopotamia, Egypt, China and Mesoamerica — with the count able to fall if Egypt is shown to have borrowed the idea from Mesopotamia, or rise if other symbol systems are deciphered</cite>, while a recent quantitative study <cite index="50-1">counts four documented independent inventions but acknowledges the total is sensitive to whether Egyptian hieroglyphs are reclassified as stimulus diffusion from Mesopotamia, which would reduce it to three</cite>, and other scholarship <cite index="51-1">names three: the Near East, China and Mesoamerica</cite>	Three sources disagreeing in a documented way	F1.5 teaches the recurrence through the disagreement: the unit's first claim is shown with the confidence grammar (contested), and the learner sees why the count moves. Dates as ranges: <cite index="52-1">Mesopotamia between 3400 and 3300 BCE, Egypt about 3200 BCE, China about 1200 BCE, Mesoamerica between 900 and 600 BCE</cite>

#	Finding	Evidence	Effect
2.2	The Cleveland Museum of Art open-access API is a complete pipeline for Ring 1: <cite index="64-1">every record carries a share_license_status of CC0, Copyrighted or Other, all metadata is CC0, and only CC0 works also provide CC0 images; the search endpoint takes a keyword and a cc0 filter</cite>. A live test returned records with creation_date_earliest and creation_date_latest (our date ranges, native), provenance chains as dated entries, exhibition histories, bibliographic citations, image URLs at three sizes, and Wikidata links per object	Direct API call, 27 September 2026	The Atlas record schema maps onto real data with no transformation; provenance and exhibition fields become edges; Wikidata links join Ring 1 to Ring 2 without our own matching
2.3	Cleveland's open access covers <cite index="62-1">more than half of the museum's collection, updated every January as works enter the public domain</cite>, with <cite index="66-1">rich metadata including authored text, exhibition history, bibliographic citations and provenance information for each artwork</cite>	Museum statements	Cleveland is the first collection to be harvested for Ring 1; the Met, Art Institute of Chicago and Smithsonian follow the same pattern, to be tested next

#	Finding	Evidence	Effect
2.4	The consultation protocol has a ready frame: <cite index="43-1">the CARE Principles — Collective Benefit, Authority to Control, Responsibility, Ethics — shift the focus from regulated consultation to value-based relationships that position data approaches within Indigenous cultures and knowledge systems</cite>; <cite index="39-1">Traditional Knowledge and Biocultural Labels, developed by the Local Contexts initiative, are metadata labels attached to collection items to communicate community-defined permissions, attribution requirements and cultural protocols; they are governance signals, not legal instruments</cite>; <cite index="44-1">institutions can implement Notices as placeholders while a community develops its Labels</cite>	Three sources	F1.26 is built on CARE; the world-set record gains a Notice or Label field; the sensitivity rule is rewritten in CARE's terms (§5). One caution: <cite index="45-1">use of the Labels is subject to a licensing fee</cite> according to one institutional guideline, to be verified with Local Contexts before adoption
2.5	The decolonial critique has a specific warning for a global module: <cite index="30-1">the ready adoption of American and European readings in places like Pakistan and India, and foreign practices displacing local ones</cite>	Sprint 1 source, re-read against v3.3	The regional slot (F1.31) must be authored locally, not translated from the global units; recorded as a design constraint

Sprint 3 plan (filling 70%, testing 30%)

- Filling: harvest Cleveland for the 60 Atlas v1 objects across all worlds and record coverage; test the Met, AIC and Smithsonian endpoints the same way; date the public-domain primary texts per world (§5); locate public-domain sound and performance sources for F1.4 (United States recordings published before 1923 entered the public domain in 2022, to be verified; the Library of Congress and Internet Archive collections are the candidates).
- Testing: build the blind map for the three units added in v3.4 (§3) and for the world chapters (what a specialist of each world would insist on); run the coverage report per world after the harvest.

Open questions after sprint 2

1. Whether Traditional Knowledge Labels can be used by a small program without a licensing agreement, and whether Notices alone are the right first step.
2. Which worlds have fewer than three CC0 objects available at item level (expected: Oceania, early Africa), and which community-published sources can fill them.
3. Which public-domain translations exist for the non-European primary texts (Yingzao Fashi, the Muqaddimah, the Vastu texts), and where paraphrase must replace quotation.
4. Whether Egypt is taught as a third or fourth independent invention, or, as proposed, as the contested case itself.

Sprint 3 findings (filling: the Met and Art Institute of Chicago pipelines, audio sources; testing: the pipeline's own limits and what they do to coverage)

#	Finding	Evidence	Effect
3.1	The Metropolitan Museum API is a second verified Ring 1 pipeline: a public-domain search for cuneiform returned 688 objects, and a single record carried objectBeginDate and objectEndDate (–3100 to –2900 for a proto-cuneiform tablet), culture, period, region and sub-region, medium, an isPublicDomain flag, a primary image, subject tags each linked to Getty AAT and Wikidata, and an object-level Wikidata URL; it carries no provenance or exhibition history	Two live calls, 28 September 2026	The Met supplies dates, places, images and the Ring 2 join; provenance and exhibitions come from Cleveland and AIC where the same object type exists; the first Atlas v1 record is that tablet, for F1.5
3.2	The Art Institute of Chicago API is a third pipeline with IIIF deep zoom native, date_start and date_end, place_of_origin, exhibition_history and provenance_text fields, controlled vocabularies for style, technique and material, and a licence split: <cite index="71-1">the description field is CC BY 4.0 and all other data is CC0</cite>	Live calls	Object stories may quote AIC descriptions only with attribution; everything else is free; the Object Story form uses AIC's IIIF directly

#	Finding	Evidence	Effect
3.3	Twentieth-century objects by community makers are not public domain in these collections: the Kente Wrapper, made 1901–1950 by Asante weavers in Ghana, is flagged <code>is_public_domain</code> false at AIC despite having no named author	Live record	Africa's coverage problem is a rights problem as much as a collecting one: the world set for F1.6 must lean on objects made before about 1900 (Benin, Ife, Nok, Ethiopian manuscripts, older textiles) or on community-published and Wikimedia material; the same rule applies to Oceania and to twentieth-century Indigenous American material; F1.3 teaches this as the record's second bias

#	Finding	Evidence	Effect
3.4	Public-domain audio for F1.4 exists in quantity: <cite index="74-1">under the Music Modernization Act all sound recordings published before 1 January 1923 entered the United States public domain on 1 January 2022</cite>; <cite index="77-1">recordings published between 1923 and 1946 are then protected for 100 years</cite>, so 1923 to 1926 recordings have since followed; the Library of Congress publishes <cite index="82-1">a National Jukebox dataset of 5,882 recordings from 1900 to 1922 as CSV, JSON and JSONL with metadata and audio files</cite>, and the Jukebox as a whole <cite index="74-1">holds over 16,000 early twentieth-century recordings from the Victor, Columbia and Harmony labels</cite>	Three sources	F1.4's sound strand and F1.21's early consumer culture get a dataset, not a search; performance recordings (vaudeville, spoken word) are in the same set; non-United States jurisdictions differ and are noted per item
3.5	Bulk harvesting and counting cannot be done from this conversation: the fetch tool strips or caches query parameters on some hosts (Cleveland returned its default listing for every query; a second Met count returned the first query's cached result), and the workspace shell has no route to these hosts	Repeated attempts	Data building needs a runtime outside the chat — a script in the app's build environment or a scheduled job — and counts reported here are single-record verifications, not coverage numbers; this is a workflow change (Hub §3, v3.1)

Sprint 3 testing: blind maps for the three new units and the world chapters (what a specialist of each would insist on, compared with the units)

Unit	The specialist's insistence	Present in v3.4	Action
F1.19a War, crisis and making	Utility schemes and rationing; military procurement as the largest patron; camouflage and dazzle as applied ornament; reconstruction and prefabrication; propaganda and typography; refugee and displaced making; the arms trade as a network	Named in the concept line	Cases to draw from Smithsonian NMAH and public-domain government prints; camouflage links to F1.15; procurement links to F1.17
F1.22a Use and consumption	Wear as evidence; repair traditions (kintsugi, darning, visible mending); second-hand trades; inheritance and dowry; advertising and the invention of the consumer; the household as a site of making	Named	Kintsugi and darning link to R4; advertising links to F1.21
F1.30a Counterfactual history	The method must be disciplined: one changed variable, consequences traced with sources, the exercise labelled as fiction; the Narrative Environments tradition and design fiction as models	Named	Spec must include the discipline; the Stranger voice tests whether the counterfactual world's rules hold

Unit	The specialist's insistence	Present in v3.4	Action
F1.6 Africa	Metallurgy (iron, Benin brass, Akan gold weights) as technology; textile trades across the Sahara and the Indian Ocean; the colonial museum as the frame of most surviving objects; the twentieth-century rights gap found in 3.3	Partly	The unit's device becomes metallurgy; the rights gap is stated in the unit
F1.7 The Americas	Fibre before pottery in the Andes; the khipu as record-keeping without writing (a recurrence question for F1.5); Mesoamerican writing and the codex; post-contact syncretism	Partly	Khipu joins F1.5's contested list; the unit's device becomes fibre
F1.8 East Asia	Bronze casting and the workshop system; porcelain as the world's first global industrial product; the Yingzao Fashi as a modular code; mingei and the twentieth-century craft revival	Partly	The unit's device becomes the workshop; porcelain links to F1.14
F1.9 South and Southeast Asia	Cotton and the chintz trade; the temple as commission; the Mughal karkhana; Indonesian textiles as social documents	Partly	The unit's device becomes cotton; the karkhana links to F1.17

Unit	The specialist's insistence	Present in v3.4	Action
F1.10 The Islamic world	Trade as the engine (Hormuz, Cairo, Córdoba, Samarkand); the astrolabe as science and object; calligraphy as the highest art; the madrasa and the waqf as commissioning institutions	Present as a network	The waqf joins F1.17's regimes
F1.11 Europe	The guild system; the printing press as recurrence not origin; the Great Exhibition; the invention of the designer	Present	The unit's device becomes the guild, linking to F1.17
F1.12 Oceania and the Pacific	Navigation as making (stick charts, canoes); tapa and fibre; the sensitivity of most surviving material; contemporary Pacific making as the living tradition	Partly	The unit's device becomes navigation; the rights gap stated

Sprint 4 plan (testing 30%: personas' blind maps — what a maker and a briefer would each insist a history module gives them; filling 70%: harvest in the build runtime once it exists; primary-text dating completed; audio selection from the Jukebox dataset).

Sprint 4 findings (testing: the four personas' blind maps, built by asking what each would insist a history module gives them before reading our units; filling: the audio selection rule and the primary-text status completed)

#	Persona insistence	Present in v3.4	Effect
4.1	Maker: "how was it made" — technique and process as a reading of the object, and how skills travelled (apprenticeship, pattern books, migrating craftsmen), not only how objects travelled	Partly: the Object Autopsy reads material, labour, trade, meaning; F1.13 traces objects	F1.25's full autopsy gains a fifth layer, technique; F1.13's concept becomes "objects, materials and skills"; F1.1 keeps three readings at Orientation. Structure v3.5, minor
4.2	Maker: "how do I mine history for form without copying"	F1.14 (copying), F1.2 and F1.26 (the line), F1.15 (ornament)	Covered; F1.14's maker Apply is reworded to ask for the transformation, not the source, and links forward to F2.13
4.3	Briefer: "how do I check a designer's historical claims" and "what does 'inspired by' cost, legally and ethically"	F1.28 (sources), F1.26 (protocol), F1.14 (licensing forward to R2)	Covered; F1.28's briefer Apply becomes "grade the sources in a designer's presentation"
4.4	Founder: "heritage as a brand asset, and its risks"	Partly: F1.24 (provenance), F1.21 (platforms)	Cases added to F1.24 and F1.17 (a heritage brand's claims and a restitution case); no new unit; the venture side lives in R1
4.5	Student: "a spine I can hold in my head"	The learning designer's recall deck was proposed, not specified	The F1 recall deck (60 Atlas v1 objects, spaced) is specified as a component of the reference form; it is the Introduction slice's memory
4.6	All four: "where is my own place in this"	F1.31 regional slot; the Lineage view	Covered; the Lineage view opens at F1.1, not at the end, so the learner's own object is the first node

#	Persona insistence	Present in v3.4	Effect
4.7	Audio selection rule for F1.4 and F1.21	New	From the National Jukebox dataset: one vaudeville or spoken-word recording (performance), one early jazz or blues recording (subculture to mainstream, forward to S3.13), one advertising or novelty recording (the consumer, forward to F1.21), one opera aria (the commissioned art, forward to F1.17); each with its date, label and matrix number, and each checked against the 1923 line; non-United States status noted per item
4.8	Primary-text status	§5 table	Confirmed as the working list; no further public-domain English translation found for the Yingzao Fashi or the Muqaddimah; both stay as paraphrase with citation

Research status after sprint 4. F1: Sprinted (4). Filling is complete to the point that the build runtime allows; testing has run against the field, the sources, the pipeline and the personas. Research continues inside phase 4 at about 85/15 as unit specs are written, with findings logged here.

Sprint 5 findings (sources and alternative routes of knowledge; testing budget raised to 50% because the question was what the record itself leaves out)

#	Finding	Evidence	Effect
5.1	Making knowledge is also held in living practices, and a major open archive documents it: the British Museum's Endangered Material Knowledge Programme <cite index="84-1">funds work recording threatened knowledge of making, use, repair and repurposing of objects, architectures and environments, in close collaboration with source communities, and publishes the results under a Creative Commons licence in an open-access repository shared with in-country institutions and communities</cite>; <cite index="86-1">documentation includes film, audio, photographs, notes, maps, 3D models and drawings</cite>; current projects include <cite index="85-1">dry-stone masonry at Great Zimbabwe</cite>	Three sources	A source for the technique layer (finding 4.1) and for the Africa and Oceania gaps that CC0 museum collections cannot fill; a model for F1.29's documentation method; Great Zimbabwe masonry becomes a case in F1.6. The exact Creative Commons variant is checked per item before use

#	Finding	Evidence	Effect
5.2	Living practices exist as open, structured data: UNESCO's intangible heritage dataset is <cite index="104-1">released as a full JSON graph with CSV subsets and updated once a year after the Intergovernmental Committee's session</cite>, organised as <cite index="105-1">a semantic graph whose main nodes are the inscribed elements, linked to projects, NGOs, countries, regions and concepts from UNESCO's thesaurus</cite>; inscribed crafts include <cite index="109-1">Chinese timber-framed architectural craftsmanship, Nanjing Yunjin brocade, mechanical watchmaking in Switzerland and France, Aleppo Ghar soap and kente weaving</cite>, and the 2025 Register of Good Safeguarding Practices includes <cite index="113-1">a safeguarding programme for Al Sadu weaving in the United Arab Emirates</cite>	Four sources	A new Atlas entity, Practice (a living tradition with holders, places and transmission), sourced from this graph and from EMKP; it bypasses the twentieth-century rights gap (finding 3.3) by showing the practice, not the museum object. F1.3 gains a third bias of the record: heritage lists are nominated by states, so they are a state's account of a community's practice. Al Sadu is noted as the first regional-vertical case. Dataset licence to verify

#	Finding	Evidence	Effect
5.3	Europe and the Pacific have aggregators with open metadata: Europeana's <cite index="100-1">metadata is published under CC0</cite>, <cite index="94-1">its APIs are free without throttling, and a reusability filter restricts results to openly licensed content</cite>, drawing on <cite index="96-1">more than 2,500 institutions and over 32 million records</cite>; a federated library shows the same pattern exists for <cite index="99-1">the Digital Public Library of America, Australia's Trove and DigitalNZ</cite>	Four sources	Europeana for F1.11 and F1.15; DigitalNZ and Trove as candidate sources for F1.12 Oceania, with Māori and Aboriginal material handled under CARE and the providers' own rights terms, to verify
5.4	The Atlantic network has a scholarly open dataset that must be handled differently from any object data: SlaveVoyages is <cite index="98-1">a multi-source, open-access dataset and interactive site of trans-Atlantic and intra-American slave-trade voyages, built to account for double-counting and regional under-representation</cite>	One source, to be verified for licence	F1.13 gains a rule: human flows are never drawn with the visual grammar of goods flows; enslaved people appear as people, with a content note, and the cotton, sugar and textile flows that the trade financed are linked from F1.19 and F1.22

#	Finding	Evidence	Effect
5.5	The Atlas as designed holds objects, not the people and practices that carry knowledge forward	Findings 5.1–5.2	Two entity types added: Practice and Living maker (with consent, from EMKP and community-published sources); each world chapter (F1.6–F1.12) ends on a living practice; the Object Autopsy gains a sibling, Practice Reading (who holds it, how it is taught, what it needs to continue)

Sprint 6 findings (angles from adjacent disciplines)

#	Discipline and angle	Evidence	Effect
6.1	History of science: reconstruction as a way of knowing. The Making and Knowing Project's open critical edition of a sixteenth-century workshop manuscript holds <cite index="119-1">over 900 recipes for making art objects, remedies and household and workshop materials</cite>, presented as <cite index="114-1">facsimile images, diplomatic and normalised French transcriptions, and an English translation</cite>, with <cite index="115-1">over 100 essays on the hands-on reconstruction of its processes in the Making and Knowing Laboratory</cite>, and <cite index="118-1">an open teaching companion with syllabi and student activities</cite>	Benchmark and source	New unit F1.28a Reconstruction: making to know (Mastery). The maker reconstructs one historical technique from a primary text and records what the text did not say; the briefer judges a "traditional technique" claim by the evidence a reconstruction would need. Content licence of the edition to verify; its software is <cite index="121-1">MIT-licensed</cite>
6.2	Anthropology of technique: the operational sequence (chaîne opératoire, after Leroi-Gourhan and Lemonnier) — a technique read as an ordered chain of gestures, tools, materials and knowledge	Grounding references, to be cited from open sources	The fifth autopsy layer (technique, finding 4.1) is built as an operational-sequence strip: the learner orders the steps, then sees the reconstruction or the documented practice

#	Discipline and angle	Evidence	Effect
6.3	Material culture studies: the object biography and the social life of things (Kopytoff, Appadurai)	Grounding references	F1.22a and the provenance chain are framed as the object's biography; the Atlas's held-by edges are its chapters
6.4	Disability history: assistive and adapted objects, and making by disabled makers, are absent from F1	Gap against the Accessibility thread	A body-and-access lens is added to the Atlas; cases added to F1.22a (use) and F1.23 (credit); level 1 of the Accessibility thread now starts in F1, not F3
6.5	Sensory history: how making sounded, smelled and felt	Partly covered by F1.4 audio	Story view uses sound wherever the record has it (workshop recordings in EMKP, Jukebox recordings of trades); no new unit
6.6	Foodways as making: utensils, vessels and ritual meals	Present in the intangible heritage graph	Cases in F1.16 (ritual) and F1.22a (use); no new unit
6.7	Digital humanities: minimal computing — the Making and Knowing Project <cite index="118-1">keeps its content openly and sustainably available by favouring durable, basic technologies and workflows</cite>	Benchmark	Confirms the Atlas data rule (static, versioned JSON per world) and adds one: every Ring 1 record also exported as plain CSV, so the world set outlives the app

Where sprints stand. Six run. Sprint 6 produced one new unit and several layers and lenses; sprints 5 and 6 together produced more sources than concepts. That is the signal that standalone sprints are reaching diminishing returns for F1. The two tests that remain cannot run here: a specialist of each world reading their chapter, and five learners using the first units. Both belong in phase 5 (test), with a lighter version possible now through the partner's Historian voice briefed as a regional specialist.

Deep Dives 1 (28 September 2026), findings for this log. (1) Read against 43 sub-regions, F1 covers 9 strongly, 13 partly, 5 thinly and 16 not at all; the whole of West Asia before Islam, Mediterranean antiquity, the steppe, Australia, Amazonia and the Caribbean are gaps. (2) Only objects had a record; eight other node types had none. (3) Licence is not provenance: 3 of 17 live-verified candidates failed on provenance or date, all of them licensed. (4) Benin's brass came mainly from Rhineland manillas (Skowronek et al. 2023). (5) Firecrawl reaches the museum APIs with query parameters intact, at 11 requests a minute: enough for deep dives, not for the harvest. (6) The Met's API has no provenance field. Details and sources are in F1 Deep Dives 1.

Deep Dives 2 and Atlas Logic (28 September 2026), findings for this log. (1) The Met's public-domain search filter returns objects whose own records are not public domain; every hit is now checked at record level. (2) Cleveland's CC0 set has no barkcloth, chintz, batik, ikat or Ordos bronzes; the Pacific, South Asian textile and steppe units need other sources (Te Papa, the Rijksmuseum, the Smithsonian, and image permissions from the Hermitage). (3) The Botai horse-domestication claim has been revised by genetics; modern domestic horses spread from the Volga-Don about 2000 BCE. (4) Early Chinese cobalt most likely came from Anarak, not Kashan. (5) Three "Mamluk" glass pieces in Cleveland are 19th-century European work. (6) Coverage after the round: 21 sub-regions strong, 12 partial, 6 thin, 4 absent. (7) No major resource groups world making by civilisation; the Atlas uses twenty grouping kinds and keeps civilisation names as searchable labels.

Groundwork round (28 September 2026), findings for this log. (1) Of 16 records read at source, 10 pass the 1970 test, 1 needs an enquiry, 4 fail (WS-005, WS-042, WS-091, WS-101) and 1 falls outside it (WS-015); the flags had mixed history gaps with test failures. (2) The Met's provenance is on its object pages, not its open API; the harvester reads it there. (3) Cleveland's search is fuzzy (1957.36 also returns 1957.36.a and .b); the harvester keeps exact matches only. (4) F1.1's anchor tablet and its sibling were in the Erlenmeyer collection by the early 1960s; how they left Iraq is not recorded. (5) Registers v0 exist as files: 77 world-set records, 110 claims (95 documented, 11 contested, 4 probable, 0 interpretive), 12 practices; only 9 claims name their node. (6) Open exemplars per chapter: F1.12 has none, the steppe one, South Asia three. (7) The Historian pre-read found 42 risks; the cross-cutting ones are "first", an unevenly applied funerary rule, claims leaning on "documented", success criteria that take sides, a pack behind the deep dives, and names in the Gulf. (8) Mingei's named makers are in copyright, while the anonymous work it collected is open. Details: [F1 Groundwork](#).

Coverage matrix

The blind map was built from what the field itself organises the subject by — Margolin's chronology, geography and cross-cutting themes; the Design History Reader's sections; Smarthistory's reframed global textbook; the Narrative Environments course's order of operations; Ansari's critique — without looking at our units; compared with F1 v3.3 it shows twelve of fifteen field themes covered and three missing, which v3.4 adds.

Field theme (from benchmarks)	Where the field states it	F1 v3.3 coverage	Verdict
Chronology from pre-human toolmaking to the present	Margolin's deep start; the pivots tradition	F1.5 recurrences; F1.19–F1.22	Covered
Geography: every region as a site of design	Margolin's geographic chapters; Reframing Art History	F1.6–F1.12 worlds	Covered, reframed as worlds and networks
Cross-cutting themes: exhibitions	Margolin's age-of-exhibitions chapters	F1.15	Covered
Cross-cutting themes: colonialism and its repercussions	Margolin; the Reader's decolonising section	F1.2, F1.24, F1.26	Covered
Cross-cutting themes: war	Margolin's extended World War chapters	Only as Occurrences data	Missing as a unit: war, crisis and making (rationing, military production, reconstruction, propaganda, displacement)
Historiography: how design history is written; design history versus design studies	The Reader's sections; Margolin–Forty debate	F1.3	Covered
Modes of production	The Reader's section	F1.17, F1.18, F1.19	Covered

Field theme (from benchmarks)	Where the field states it	F1 v3.3 coverage	Verdict
Gender	The Reader's section	F1.18	Covered, textiles-led; the unit's cases must reach beyond textiles
Consumption, use and the life of things in households and hands	The Reader's consumption strand; Forty's Objects of Desire	Not present; F1 is production-led	Missing as a unit: use and consumption, how things were lived with
Local, regional, national, global; glocal teaching	The Reader; the Arab graphic-design study	F1.31 and the regional slot rule	Covered, on condition of local authorship
Sustainability and the material record	The Reader; the planetary thread	F1.22	Covered
Demythologise, deconstruct, decolonise, decommodify	Narrative Environments' first move	F1.3, F1.15, F1.24	Covered
Systems mapping through counterfactuals and speculative histories	Narrative Environments' second move	Not present	Missing at Mastery: counterfactual history, a history that did not happen, as a maker's and briefer's exercise and a bridge to M1's speculative research
Pluralism is not decolonisation	Ansari	F1.3, F1.30	Covered, and made a design constraint
The object read as a document	Smarthistory's form; 100 Objects	F1.1, F1.25	Covered

Where sources are rich and we have no unit. Exhibition histories and provenance chains arrive with every Cleveland record; v3.3 uses them in two units (F1.15, F1.24). A third use is added without a new unit: the Occurrences view gets an exhibitions layer from the records themselves.

Where we have units and sources are poor. Oceania (F1.12) and early Africa (F1.6) in CC0 collections; sound and performance for F1.4. These are tracked in the coverage report, not solved by cutting the units.

Changes adopted into v3.4. Three units added (F1.19a War, crisis and making; F1.22a Use and consumption; F1.30a Counterfactual history at Mastery); F1.5 rebuilt around the contested count of writing's inventions; F1.18's case set widened beyond textiles; F1.26 rebuilt on CARE with a Notice or Label field. Evidence threshold met for each: at least one benchmark and one source.

F1 structure v3.4

Thirty-four units, about 4 / 22 / 20 hours; this table is now the live list for F1 (the v3.3 table in Pass 2 v1 is superseded), and the Δ column marks what sprint 2 changed. Columns as before: opening move and forms (1 scrollytelling, 2 step-through, 3 object story, 4 explorable, 5 before/after, 7 video, 8 audio, 10 comparison wall, 11 timeline scrub, 12 map, 13 argument card, 14 sequential illustration, 15 prediction prompt); Apply M = maker, B = briefer.

Unit	Concept	Depth	Field	Opening · forms	Apply (M / B)	Voice	Δ
F1.1	One object, three readings: material, labour, meaning	O	SRC	Object first · 3	M: read an object you own / B: write its attribution line	Historian	—
F1.2	The reference-to-appropriation spectrum	O	SRC	Prediction first · 15, 3	Both: sort six cases on the plane; B: flag the one you would stop	Historian	plane, not line
F1.3	How histories get written: canons, periods, the timeline as an argument; design history versus design studies	P	SRC	Argument first · 13, 11	Both: annotate a canonical timeline for what it excludes	Mirror	widened

Unit	Concept	Depth	Field	Opening · forms	Apply (M / B)	Voice	Δ
F1.4	Interdisciplinary discourse: film, performance, sound, gaming and digital culture as teachers of making	P	SRC, GRM.n	Story first · 10, 7, 8	Both: extract one method for your world	Mirror	audio sources pending
F1.5	Recurrences: writing was invented three or four times; cities, metallurgy, weaving and printing many times	P	SRC	Data first · 1, 11 (simultaneity view)	Both: place three objects on parallel rows as ranges; state the count you accept and why	Historian	rebuilt on the contested count
F1.6	Worlds of making: Africa	P	SRC	Object first · 3, 10	M: reference note / B: reference note with consultation flag	Historian	coverage flagged
F1.7	Worlds of making: the Americas	P	SRC	Object first · 3, 10	same	Historian	—
F1.8	Worlds of making: East Asia	P	SRC	Object first · 3, 10	same	Historian	—
F1.9	Worlds of making: South and Southeast Asia	P	SRC	Object first · 3, 10	same	Historian	—
F1.10	The Islamic world as a network: a world made of routes	P	SRC	Data first · 12, 3	same, plus a route your world could use	Historian	—
F1.11	Europe as one world among several	P	SRC	Object first · 3, 10	same	Historian	—
F1.12	Worlds of making: Oceania and the Pacific	P	SRC	Object first · 3, 10	same, with the sensitivity notice explained	Historian	coverage flagged

Unit	Concept	Depth	Field	Opening · forms	Apply (M / B)	Voice	Δ
F1.13	Networks: Silk Roads, Indian Ocean, trans-Saharan, Mediterranean, Atlantic, Pacific	P	SRC	Data first · 12, 1	Both: trace one object's route end to end	Historian	—
F1.14	Copying, transfer and counterfeit	P	SRC, RGT	Object first · 5, 3	M: the copy in your references / B: the clause it would have needed	Historian	—
F1.15	Ornament as a global language; the exhibition as taxonomy	P	GRM.f, SRC	Prediction first · 3, 10	Both: Pattern Comparer; B: name what was extracted and from whom	Historian	exhibitions layer from records
F1.16	Ritual and belief as drivers of making	P	GRM.n, SRC	Object first · 3, 8	Both: the ritual your world serves	Historian	—
F1.17	Who commissions: patrons, guilds, merchants, industry, agencies, platforms	P	SRC, CMB	Argument first · 2, 13	M: your place in the chain / B: the patron's brief	Client	exemplar spec
F1.18	Textiles and the making called women's work; women's making beyond textiles	P	SRC, GRM.m	Making first · 3, 7	Both: a credit line	Historian	cases widened
F1.19	Industry, the machine and the exhibition	P	SRC	Story first · 1, 3	Both: what the machine changed in your medium	Fabricator	—

Unit	Concept	Depth	Field	Opening · forms	Apply (M / B)	Voice	Δ
F1.19a	War, crisis and making: rationing, military production, reconstruction, propaganda, displacement	P	SRC, PER	Story first · 1, 12	Both: what a crisis would do to your world's supply, materials and message	Fabricator	added
F1.20	Modernisms, plural	P	SRC	Object first · 10, 13	Both: the modernism your world descends from, and refuses	Historian	—
F1.21	Consumer society, the digital and the platform	P	SRC	Story first · 1, 7	Both: the platform your world lives on	Client	—
F1.22	The planetary present: making as extraction	P	SRC, PLW	Data first · 12, 4	Both: the material chain of one object you own	Planet	—
F1.22a	Use and consumption: how things were lived with, worn out, repaired, resold, inherited	P	SRC, LCY	Object first · 3, 5	M: the use-life of your anchor / B: what the brief must say about use	Mirror	added
F1.23	Obscured labour: the credit map	P	SRC	Object first · 3	Both: credit map of your own project	Historian	—
F1.24	The museum as author: collecting, provenance, restitution	P	SRC	Argument first · 13, 3	M: a provenance chain / B: what to ask a museum partner	Historian	provenance from records
F1.25	Reading an object as history: slow looking and the autopsy	P	SRC	Lab first · Object Autopsy, full	Both: a full autopsy	Mirror	—

Unit	Concept	Depth	Field	Opening · forms	Apply (M / B)	Voice	Δ
F1.26	Attribution and consultation as protocol, on the CARE principles	P	SRC	Problem first · 2, 15	Both: draft the protocol; B: apply it to a real brief	Historian	rebuilt on CARE
F1.27	Counter-history research piece on one lineage	M	SRC, DOS	Artifact first · Atlas authoring	Both: the piece with an attribution record	Historian	—
F1.28	Primary sources and archives	M	SRC	Problem first · Source Grader	Both: five sources graded, one translation dated	Historian	text list in §5
F1.29	Vernacular intelligence: oral history, folktale, local taxonomy, with consent	M	SRC	Making first · Oral History Kit	Both: one consented account	Historian	Notice or Label field
F1.30	Re-timing the Atlas: other calendars and periodisations	M	SRC	Data first · Calendars	Both: your lineage on another calendar	Historian	—
F1.30a	Counterfactual history: a history of making that did not happen	M	SRC, PRM	Problem first · 1, 13	M: one object from the counterfactual, made / B: the brief that world would have issued	Stranger	added
F1.31	Regional slot: the learner's own place, authored locally	M	SRC	Artifact first · Lineage	Both: the slot filled	Historian	local authorship constraint

Closing test. Unchanged from v3.3: the maker's Object Autopsy on an unseen object with attribution line and material origin; the briefer's sort of eight cases on the plane with reasons and consultation notices; one line into the sources record.

Changes since v3.4 (the full v3.6 list, with the Was mapping, was merged into the Master Structure register on 2026-09-28; the table above stays at v3.4 as the record of sprint 2)

Version	Change	From
v3.5	F1.25's autopsy gains a fifth layer, technique; F1.13 becomes "objects, materials and skills"; F1.14's maker Apply asks for the transformation; F1.28's briefer Apply grades a designer's sources; heritage-brand and restitution cases in F1.24 and F1.17; the recall deck specified; the Lineage view opens at F1.1	Sprint 4
v3.6	F1.28a Reconstruction: making to know (M) added; Atlas entities Practice and Living maker; each world chapter ends on a living practice; Practice Reading as the autopsy's sibling; F1.3 adds the state-authored heritage list as a bias of the record; F1.13 human-flow rule and SlaveVoyages; body-and-access lens; accessibility level 1 moves into F1; every record exported as CSV	Sprints 5 and 6

Unit count after v3.6: 35. Hours: 4 / 22 / 22 (the descriptor's hours update with the register).

Data and sources

The pipeline from an open collection to an Atlas record is verified; the remaining data work is harvesting, checking coverage, dating the primary texts and settling the protocol labels.

How a collection record becomes an Atlas record (verified on Cleveland; the same mapping to be tested on the Met, AIC and Smithsonian)

Atlas field	Collection field	Note
Title, accession, collection	title, accession_number, creditline	credit line reproduced as the collection requires
Date range with uncertainty	creation_date_earliest, creation_date_latest, creation_date (text)	native ranges; never drawn as a point

Atlas field	Collection field	Note
Place and world	culture, find_spot, department	world assigned by us; place resolved to Getty TGN or Pleiades where possible
Materials	technique, support_materials	material origins added by our research, not in the record
Makers and labour	creators (name, role, dates)	unnamed workshops recorded as such; community field added by us
Provenance chain	provenance (dated entries)	each entry becomes a held-by edge
Exhibited at	exhibitions (current and legacy)	each becomes an exhibited-at edge and an Occurrences entry
Sources	citations	grade assigned by the Source Grader
Image and licence	images (web, print, full), share_license_status	only CC0 status yields images; status re-checked each January when collections update
Ring 2 join	external_resources.wikidata	the object's Wikidata id links movements, people, places without our own matching
Sensitivity and Notice or Label	not in the record	added by our review; default exclusion for sacred, ancestral and funerary material
Story, alt text, audio description	not in the record	written by us; museum label text used only for facts

Collections status

Collection	Access	Status	Next
Cleveland Museum of Art	Keyless API; CC0 filter; provenance, exhibitions, citations, Wikidata links	Verified live	Harvest the 60 Atlas v1 objects; coverage report
Metropolitan Museum	Public API; public-domain flag	Known, untested this sprint	Test the same mapping
Art Institute of Chicago	Public API; public-domain images	Known, untested	Test
Smithsonian Open Access	API with key; CC0	Known, untested; key needed	Register and test
Rijksmuseum, National Gallery of Art, Cooper Hewitt	APIs or open data dumps	Known, untested	After the first four
Archnet	Item-level terms	Known	Terms per item for F1.10
Wikimedia Commons	Item-level licence	Known	Gap filling for Oceania and early Africa

Update after sprint 3. The Met and AIC rows above move to Verified live; the Met supplies dates, places, images, AAT and Wikidata links but no provenance or exhibitions; AIC supplies dates, places, provenance, exhibitions and IIIF, with descriptions CC BY and the rest CC0. Rights finding 3.3 adds a rule to the world-set register: an object's licence is checked per record, never assumed from its maker being anonymous or its date being old, and the coverage report counts licensed objects, not objects. The Library of Congress National Jukebox dataset joins the sources list for F1.4 and F1.21.

Protocol frameworks adopted for F1.26, F1.29 and the world-set record

Framework	What it gives	How F1 uses it
CARE Principles for Indigenous Data Governance	Collective Benefit, Authority to Control, Responsibility, Ethics as the frame for handling data and heritage of Indigenous Peoples	F1.26's protocol is structured on the four principles; the briefer's version becomes a checklist for any brief that references a living tradition
Local Contexts Traditional Knowledge and Biocultural Labels, and Notices	Community-defined permissions, attribution and cultural protocols carried as metadata; Notices as institutional placeholders	A Notice or Label field on every world-set record; Notices applied by default to material from Indigenous communities until a community's own Labels exist; licensing terms for Labels to be verified before adoption
Free, prior and informed consent	The standard for oral-history and community material	The Oral History Kit's consent flow (F1.29)
UNESCO 2003 convention on intangible heritage	The international frame for craft and oral traditions	Referenced in F1.26; to be verified for citation

Sensitivity rule, restated in CARE terms. Authority to control rests with the source community: material that is sacred, ancestral or funerary is excluded by default; material from Indigenous communities carries a Notice; a Label replaces the Notice when the community has issued one; any exception is recorded with its source and reviewed.

Primary texts per world, with public-domain status (originals and translations differ; every entry to be confirmed before use)

Text	World and unit	Status
Vitruvius, De architectura (Morgan translation, 1914)	Europe; F1.11, F1.28	Public domain, original and translation
Theophilus, On Divers Arts (Hendrie translation, 1847)	Europe; F1.17, F1.18	Public domain

Text	World and unit	Status
Cennini, Il Libro dell'Arte (Herringham translation, 1899)	Europe; F1.17	Public domain; later translations in copyright
Vasari, Lives (De Vere translation, 1912–15)	Europe; F1.3	Public domain
Li Jie, Yingzao Fashi (1103)	East Asia; F1.8	Original public domain; no complete public-domain English translation known; paraphrase with citation
Ibn Khaldun, Muqaddimah	Islamic world; F1.10, F1.17	Original public domain; the 1958 English translation in copyright; a nineteenth-century French translation is public domain; paraphrase for English
Vastu and Shilpa texts	South Asia; F1.9	Originals public domain; translations vary; verify each
Owen Jones, The Grammar of Ornament (1856)	Exhibitions; F1.15	Public domain
Great Exhibition catalogues and reports (1851)	F1.15, F1.19	Public domain
Ruskin, Morris, Dresser, Pugin	Europe; F1.19	Public domain
Semper, Der Stil (1860s)	Europe; F1.18	German original public domain; English translations in copyright
Loos, Ornament and Crime (1908–10)	Europe; F1.15	German original public domain; translations vary
Gropius, Bauhaus manifesto (1919)	Modernisms; F1.20	Public domain in the United States by date; not yet in life-plus-seventy jurisdictions; quote by jurisdiction rule
Sullivan, The Tall Office Building Artistically Considered (1896)	F1.19	Public domain

Text	World and unit	Status
Guild records, merchant ledgers, pattern books	F1.17	Public domain by date; sourced from Internet Archive and national archives

Atlas and interactives: what sprint 2 changes

The Atlas design in F1 Pass 2 v2 stands; sprint 2 changes four things in it, all because the collection records turned out to carry more structure than the design assumed.

Change	Why	Effect on the design
Exhibited-at edges and an exhibitions layer in the Occurrences view	Every record carries its exhibition history, dated	F1.15 and F1.24 gain data without new research; the Coverage Mirror can show how often an object has been exhibited and where
Provenance chains as first-class edges	Records carry dated provenance entries	The Connections view can trace ownership across centuries; F1.24's provenance chain is a query, not a drawing
Ring 1 to Ring 2 join through the record's own Wikidata id	Cleveland records link to Wikidata	Movements, people and places attach to objects without our matching; the two-relation rule applies from those ids
Date ranges native	Records carry earliest and latest dates	The Timeline's range bars need no transformation; uncertainty is the record's own

Interactives affected. Connect Two Things gains provenance and exhibition edges; What Was Happening Elsewhere gains exhibitions; the Object Autopsy's provenance layer reads the record; the Spectrum Sort becomes the Spectrum Plane (two axes, reference-to-appropriation and harm) as decided in Pass 2 v2.

Registers to open in phase 4 (as tabs of this file or sheets)

Register	Columns	First entries
World set	the Atlas record schema plus world, units, sensitivity, Notice or Label, coverage flag	the 60 Atlas v1 objects, from the Cleveland harvest first
Claims	subject, relation, object, source, confidence (documented, probable, contested, interpretive), unit	the writing-inventions count (contested) as entry 1
Assets	asset, type, source, licence, units, alt text status	Owen Jones plates; exhibition prints
Coverage	world, objects verified, units served, gap flag	after the first harvest
Partner prompts	voice, unit, prompt, tested on, drift notes	the Historian for F1.5 and F1.26 first

Audit across all versions, after the sprints

Every section of every earlier document was checked for whether F1 now carries what it should; four items were orphaned and are pulled in here, and one program-level requirement — a module descriptor — had never been written for F1, so it is written below.

Section-by-section audit (source → where it lives now for F1 → status)

Source	What it asked of F1	Lives now	Status
Original syllabus 1.1 (six units)	Global discourse, historiography, vernacular intelligence, ethics of reference, obscured labour, regional centering	F1.4, F1.3, F1.29, F1.2 and F1.26, F1.23, F1.31	Carried

Source	What it asked of F1	Lives now	Status
Analysis §3 (F1 essential question, resources, method, interactives, evidence)	The question "whose history is our design history"; timeline, spectrum, credit map, atlas; annotated counter-history and case rulings	§4; the Atlas; F1.27; the closing test	Carried; the analysis's Regional Material-Culture Atlas became the Atlas as a whole
Analysis §8–§9 (patterns; unit anatomy; threshold concept 1)	Layered Timeline, Spectrum Sort, Guess-and-Reveal; "history is a web, not a line"	Pass 2 v2 §4; the descriptor below	Carried; the threshold concept now leads the descriptor
Concept v1 §3 (F1 as first drafted for two lanes)	Object Autopsy; nine pivots; centres and peripheries; Apply for both lanes	Rebuilt: pivots to recurrences; centres to worlds and networks	Superseded by design
Concept v1 §7 (research plan by module type; the four files)	Historical modules need world sets, scholarship, primary sources; source list, case library, claims sheet, open questions	§2 log; §6 registers	Carried; the four files are the world-set, claims, asset and coverage registers plus the log
Concept v2 §4 (vocabulary)	Precise terms, no adjectives; terms named after the lab	Unit names in §4; the rules apply	Carried
Final Structure §5 (twelve principles), §8 (threads), §9 (voices), presentation forms, consumption matrix	Opening moves; Attribution thread checkpoints; the Historian and Planet voices; forms per unit; three consumption forms per unit	Opening moves and forms in §4; voices in §4	Partly: consumption forms are specified only for F1.17; the rule is now that every unit spec carries them (pulled in)

Source	What it asked of F1	Lives now	Status
Final Structure §6 (module-level program)	A module descriptor: aims, three to five outcomes, evidence, hours, prerequisites; the closing test	Closing test and hours in §4	Orphaned until now: the descriptor is written below
Master Structure §2–§3 (artifact schema; F1's 23 units)	SRC as the field; unit rows	§4 with the mapping	Carried; the register itself still holds the 23-unit list and must be updated to v3.4 (Hub action)
Master Structure §9–§11 (Timeline Atlas engine; media; lecture rules)	Layers by version; media codes; lecture conversion	Pass 2 v2 §2–§3; §6 here	Carried and extended
F1 Pass 2 v1 §2 (benchmarks), §4 (expert round), §7 (rights and media plan), §8 (exemplar unit)	Benchmarks; 26 flaws; five rights rules; media counts; the F1.17 standard	Referenced from this file	Carried as frozen reference; the rights rules are restated in CARE terms in §5, the media plan stands and gains the audio dataset
F1 Pass 2 v1 §6 (world-set candidates; Atlas spec v1)	Candidates by unit; layers by version	Superseded by Pass 2 v2's Atlas and by §5 here	Superseded; candidates list remains the harvest's shopping list
F1 Pass 2 v2 §5 (scenarios), §6 (UI and front end), §7 (staging, risks, questions)	Seven archetypes; layout and components; four Atlas versions; five questions	Referenced; questions consolidated in the Hub	Carried; one orphan pulled in: the world chapters' distinct devices are now assigned in the sprint 3 testing table

Source	What it asked of F1	Lives now	Status
Program Hub §6 (open questions)	Groups B and C for F1	Hub	Open

Orphans pulled in. Consumption forms as a required row in every unit spec; the world chapters' devices (metallurgy, fibre, the workshop, cotton, the waqf and route, the guild, navigation); the rights-per-record rule; the module descriptor.

F1 module descriptor (the format Final Structure §6 requires of every module)

Element	Content
Aim	To give a maker or a briefer a working history of making across the whole world and timeline, read as a web of objects, routes, makers and institutions rather than a line, and to make them able to reference, credit and consult with authority
Threshold concept	Design history is a web with obscured strands, not a line
Outcomes	1. Read any object as a document of material, labour, trade and meaning, and write its attribution line · 2. Place an object on the Atlas by world, network, recurrence and date range, and say what else was happening · 3. Distinguish reference, quotation, adaptation, translation and appropriation on a case, including the harm to a source community, and act on the difference in a brief · 4. Trace how the brief has changed hands across commissioning regimes and locate your own work in that chain · 5. Run the attribution and consultation protocol on your own project
Evidence	Maker: Object Autopsy on an unseen object with attribution line and material origin. Briefer: sort of eight cases on the plane with reasons and consultation notices. Both: the sources record
Hours	4 / 22 / 20
Prerequisites	None; O1 recommended first

Element	Content
Threads served	Attribution and Authority (owner module); Planetary Weight (F1.22); Writing and Argument (one argument card answered)
Nine-angle check	Lane: both Apply steps in every unit. Depth: 2 / 24 / 8 units. Artifact: SRC, with GRM.f, GRM.n, CMB, PLW, LCY, RGT touched. Medium: none; every area's lineage unit points back here. Knowledge type: historical and cultural, with two method units. Traditional versus innovative: about 45/55 by time. Geography: global, with a regional slot authored locally. Career stage: student takes O then P in order; mid-career takes P fast and the Mastery research; founder takes O plus F1.17, F1.14, F1.24, F1.26. Time budget: five hours is F1.1, F1.2, F1.17 and F1.26 at Orientation and Practice

Stage, next actions, and what this file supersedes

F1 is at structure v3.6 (35 units), with v3.7 proposed (Q6) and two new chapters proposed (Q1, Q13, Q14), which would make 37 units at about 4 / 24 / 22 hours. All nine world chapters and the networks unit have deep dives: [F1 Deep Dives 1](#) and [F1 Deep Dives 2](#). The Atlas's logic is in [F1 Atlas Logic](#). The groundwork round (provenance, registers v0, pre-read, grouping pages) is in F1 Groundwork. Decisions Q1–Q26 are open in the Program Hub.

Supersessions. This file's §4 replaces the unit list in F1 Pass 2 v1 §5. This file's §2 continues the research log from F1 Pass 2 v1 §3, which remains sprint 1's record. The Program Hub's F1 module section now points here.

Next actions, in order

1. Your answers to Q1–Q6 (F1 Deep Dives 1) and P1–P11 (Phase 4 Foundations).
2. The Atlas views pass: nodes and views, merged views, a grouping view for movements and other groupings.
3. Provenance checks on the five flagged records, including F1.1's anchor tablet (Met 1988.433.1).

4. Deep dives F1.13, F1.12, F1.10, F1.7, F1.8, F1.9 and F1.11 on template v2, each with a Historian pre-read and a reciprocal reviewer; the two new chapters if Q1 is agreed.
5. About 16 standard and 10 light specs in batches; research inside them at 85/15; then G3.

What proceeds without you. Shortlisting objects and drafting claims for F1.5 and F1.6; everything else waits on P1–P11.
